

Project Design Phase -1

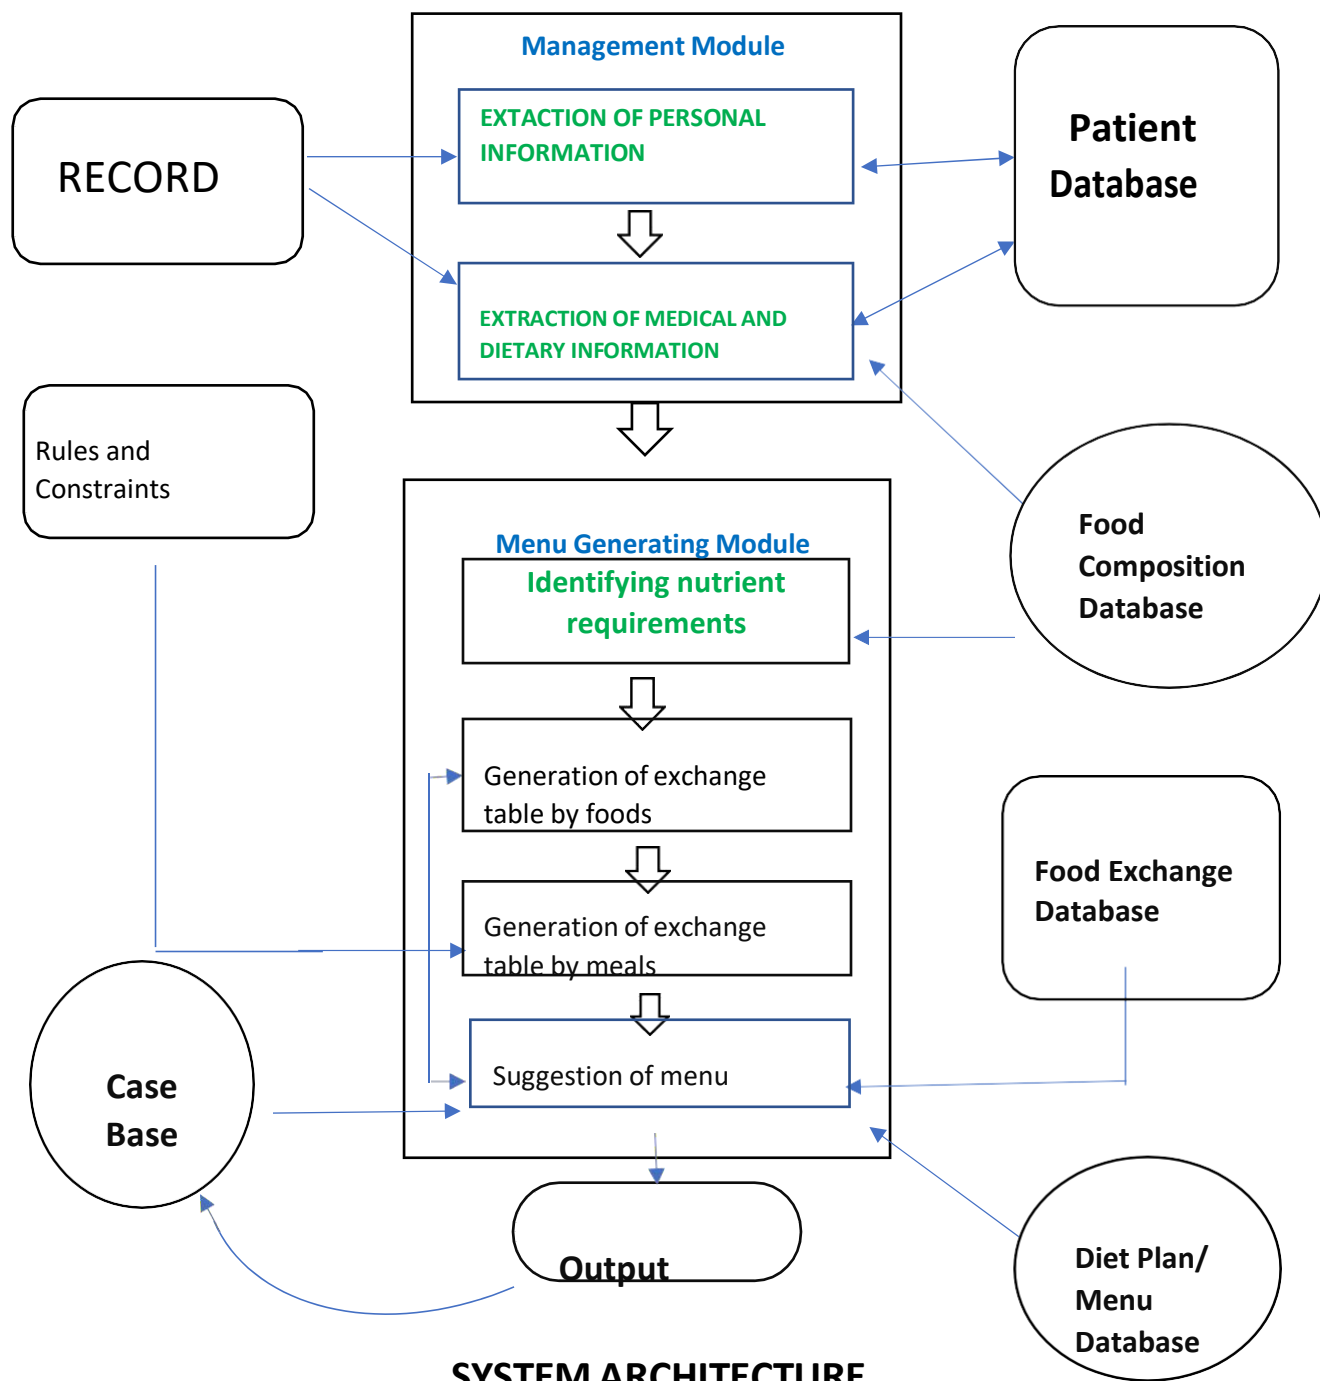

Solution Architecture

Date	1 October, 2022
Team ID	PNT2022TMID26133
Project Name	Nutrition Assistant Application
Maximum Marks	2 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
